

Babies love to suck. A baby who seems to want to nurse or after he/she had just been fed, may need something else to suck on. A "soother" may satisfy him/her. Your baby may be using a soother to help him/her through the transition from total parental dependence to independence. The comfort derived from sucking gives your baby a self-directed way to handle stress without looking for your help.

How to select the right soother for your baby?

Soothers come in a variety of teat shapes (eg. newborn, cherry, olive and orthodontic). Try several different types and let your baby to judge which one suits them best. You also need to choose the flange with ventilation holes. Without the holes, it may affect the proper breathing of your baby. Furthermore, without the holes, baby's saliva can collect behind the base causing rashes. Keep in mind that, during your baby's growing process, the soother has to be changed. "One size doesn't fit all" Newborn teat: Suitable for baby 0-3 months. Cherry/Olive/Orthodontic: Suitable for baby 3 months onwards.

When should you replace a soother?

That depends on how your baby suck it. The teat of soother will wear down with age and use. You must check the soother thoroughly and carefully before giving it to your baby. Note that small holes, tears and weak spots could cause the teat to break off when sucked. Generally, due to hygiene purpose, it is advisable to change the soother every month even if the soother still looks "good".

How do you clean a soother?

Before the first use, it's a good idea to sterilize the new soother with boiling water. Therefore, you should purchase the soother which allows for boiling to sterilize. If your baby drops his pacifier on the floor, rinse it off in hot water.

Should you offer a soother to your baby when he/she is crying?

If you have fed, burped, cuddled, rocked and played with your baby and he/she seems to be crying, there is nothing wrong with offering your baby a soother. The comfort from sucking the soother can present a little piece of love and security when you are not around to provide it. It can help him/her in difficult or stressful situation when your baby is crying.

Will a soother interfere with the development of my child's teeth?

It is unlikely that your child will continue sucking his/her soother well into the childhood years, where it might threaten proper dental development. This is because during the years, when your child is using a soother, the teeth grown are baby teeth. Permanent teeth generally don't start appearing until around age 5 or 6.

Why babies may depends on soother to sleep?

You can use soother to help your baby to sleep. Some babies find sucking soother a comforting experience. Be aware that, through the night, if he/she wakes and realizes that the soother had slipped out from his/her mouth, he/she will feel dither until you put it back on your baby. Once your baby is old enough (around 6 months of age), he/she will be able to find it on his/her own and will begin to sleep better.

WONDER WORLD

Swiss biologist and psychologist Jean Piaget (1896-1980) is renowned for constructing a highly influential model of child development and learning. Piaget's theory is based on the idea that the developing child builds cognitive structure for understanding and responding to physical experiences within his or her environment.

Piaget further attested that a child's cognitive structure increases in sophistication with development, moving from a few innate reflexes such as sucking the soother and nipple to highly complex mental activities.

In general, our society tends to favour Left-Brain modes of thinking, while downplaying the Right-Brain ones in a child's development and learning stage.

Left-Brain scholastics subjects, focus on logical thinking, analysis and accuracy. Right-Brain subjects, on the other hand, focus on aesthetics, feelings and creativity.

LEFT BRAIN	RIGHT BRAIN
Logical	Random
Sequential	Intuitive
Rational	Holistic
Analytical	Synthesizing
Objective	Subjective
Looks at parts	Looks at wholes

The recent trend shows our society's progress towards stressing the importance of balancing Left and Right-Brain development that controls two different "modes" of thinking.

TAKASO RUBBER PRODUCTS SDN. BHD. sees the needs of nurturing your baby with love. Therefore, equal weight to the arts, creativity and the skills of imagination and synthesis should be developed at each different learning stage as soon as your baby is born.

THEMES & BENEFITS

JAPLO WONDER WORLD Soothers are specially designed to safely satisfy your baby's non-nutritive sucking instinct. We want to give your baby the best synthesis by having 4 themes with attractive colours combination and animation as follows:

THEMES	BENEFITS
1. PRO	Stimulates your baby's basic art of learning.
2. FOREST	Stimulates your baby's spirit of adventure.
3. FRUITY	Stimulates the 5 Senses of your baby: Tasting, Hearing, Smelling, Touching and Viewing.
4. TWINKLE STAR	Stimulates your baby's imaginations.

FEATURES

The colourful combination of the soothers will also stimulate your baby's cognitive and visual development. It is a holistic effect which nurtures the intuition, imagination and creativity of your baby.

The luminous handle gently glows in the dark allowing parents and baby to locate soothers easily during the night and dark environment.

SHAPE OF THE TEATS

For each theme, there are 4 types of teats, which are New Born, Cherry, Olive and Orthodontic.

NEW BORN

The smaller and shorter shape of the teat is suitable for your baby's comfort and familiarity. Suitable for newborn and up to 3 months.

CHERRY

The shape of the teat have been designed similar to the shape of mother's breast nipple. It is suitable for your baby of 3 months and above.

OLIVE

When your baby's teeth started to grow and likes to bite, Olive shape is the choice to be given to your baby as a form of good exercise to aid healthy teething. It is suitable for your baby of 3 months and above.

ORTHODONTIC

The curve of the orthodontic soother shield pulls gently inward as your baby sucks, and it encourages healthy teeth and jaw development of your baby. It is suitable for your baby of 3 months and above.

QUALITY

JAPLO WONDER WORLD Soothers are made of non-toxic hygienically formed natural bite-resistant material. JAPLO soothers are specially designed to form naturally in babies mouths satisfying babies needs for supplement sucking.

They are complied to International Standard: British Standard 5239 and Safety Toy Standard: EN71-3 for parents peace of mind and babies safety.
